

CONNECTING BUSINESS TO REAL-TIME DATA

THE CALIBER OF YOUR DECISIONS DEPENDS UPON THE QUALITY OF YOUR INFORMATION.

What if you could have all the information you need to successfully run your business, right at your fingertips? Web data holds a goldmine of potential opportunities for your business, but accessing this data—and, more importantly, transforming it into actionable information—can be extraordinarily difficult and prohibitively expensive. To gather real-time information from deep in the Web, you need powerful technology that both accesses and integrates critical Internet data, automatically. The good news? That's exactly what we provide.

At Fetch Technologies, we bring you the Web data you need, in a form you can use immediately. Our automated technology does in minutes what used to take hours, even days, to do. Accurate, real-time data is gathered continuously, and transformed to work seamlessly with your existing data management systems. Stop searching for information, and start making critical business decisions based on what you've learned from it. You're about to strike gold.

At Dow Jones, we are in the business of understanding businesses, and after a lot of thorough review we decided that Fetch Technologies was the only company that had the technology and people smarts to crack our data problem. Their ability to understand our problems and build a team that could help us turn our technology dreams into reality is a rare quality in technology providers. Because of this, they are a preferred vendor with us and they've proven over and over that their technology is as robust and stable as they originally promised."

Martin Murtland
Vice President and Managing Director, Dow Jones

FETCH LIVE ACCESS

DELIVERING THE DATA YOU NEED IN A FORMAT YOU CAN USE.

Fetch Live Access is a powerful Web data service that automatically aggregates, normalizes, and integrates online data into the system of your choice. This means that your team can stop searching for data, and start interpreting its meaning for your business. Our intelligent agents work for you - constantly updating data streams and utilizing machine learning technology to adapt to changing data sources. We host your solution for you - unless your organization chooses on premise administration - so you can devote engineering resources to revenue-generating projects. Fetch Live Access takes data acquisition off of your hands, and in return gives you the real-time business information that you need.

And the Fetch hybrid cloud environment means that Fetch clients realize maximum cost savings, reliability, and implementation speed.

FETCH LIVE ACCESS SOLUTIONS:

COMPETITIVE INTELLIGENCE

Fetch navigates the deep Web - the pages that web crawlers miss - to bring you intelligent data on markets, companies, pricing, media, and more.

CONTENT AGGREGATION

Fetch technology uses precision extraction so you get exactly the information you need - in unlimited quantities.

NEWS AGGREGATION

Fetch aggregates news content from tens of thousands of news sites, news archives, and corporate press releases, in real time.

BACKGROUND CHECKS

Fetch provides automated access to online background screening libraries to deliver background information in seconds.

WE'RE REVOLUTIONIZING THE WAY WEBSITE DATA IS GATHERED.

ABOUT FETCH TECHNOLOGIES

For more than a decade, we've been both innovators and leaders in the fields of data extraction and information delivery. In 1999, Fetch's founders—researchers at the University of Southern California Information Sciences Institute—developed the core artificial intelligence (AI) algorithms behind Fetch Live Access. Fetch's AI solutions were then refined through years of research funded by the Defense Advanced Research Projects Agency (DARPA), the National Science Foundation (NSF), the U.S. Air Force, and other U.S. Government agencies. Fetch holds numerous patents pending in the fields of AI and information extraction, and its Labs facility continues to receive government grants and contracts which support the development of new technologies that benefit both our country and our clients.
