

DELIVERING THE DATA YOU NEED IN A FORMAT YOU CAN USE

Fetch Live Access technology is a complete, end-to-end data service that is:

FLEXIBLE

Gather data from any website and integrate it into any existing database architecture.

ACCURATE

Use precision extraction so you get exactly the information you need.

SCALABLE

Can be programmed to access data from ten websites—or ten million websites.

RELIABLE

Agents don't depend on fragile coding, which means you get more reliable data delivery.

Fetch Live Access is a data service that provides users with the ability to access, manage, and deliver data from websites. It replaces outdated manual search and crawling methods with smart machine-learning agents that are trained to find data deep within the Web. These same agents then transform this raw data into usable, actionable information that can be easily integrated into your existing systems.

Fetch Live Access can retrieve data from HTML, XML, textual, and RSS data sources; handle forms and download binary objects, including images, videos, PDF, and Word/Excel documents; and extract data in any language.

DRIVE BUSINESS FORWARD WITH REAL-TIME DATA FROM THE WEB

INCREASE PRODUCTIVITY

- Eliminate hours of custom engineering time.
- Automate searches.
- Access only the precise, targeted data you need.
- Quickly assess the health of your searches.

MAXIMIZE EXISTING RESOURCES

- Supercharge your existing systems with new data.

INCREASE REVENUE

- Respond quickly to market demand.
- Optimize sales and promotions.

OUTSMART THE COMPETITION

- Quickly access competitive data and customer sentiment information.
- Gain access to the most recent information being published.

HOW IT WORKS

STEP 1: ACCESS

- Access data with intelligent agents.
- Reliably extract data with high accuracy.

STEP 2: INTEGRATE

- Transform disparate data sources into useful information.

STEP 3: MONITOR

- Continually and automatically monitor the data.
